$$1) \quad X=1 \rightarrow 0.13 + 0.15 + 0.05 = 0.33$$

$$X=2 \rightarrow 0.15 + 0.2 + 0.12 = 0.47$$

$$X=3 \rightarrow 0.07 + 0.1 + 0.03 = 0.2$$

$$Y=1 \rightarrow 0.13 + 0.15 + 0.07 = 0.35$$

$$Y=2 \rightarrow 0.15 + 0.2 + 0.1 = 0.45$$

$$Y=3 \rightarrow 0.05 + 0.12 + 0.03 = 0.2$$

$$a) \quad H(X) = -[0.33 \log(0.33) + 0.47 \log(0.47) + 0.2 \log(0.2)]$$

$$= -0.52782 + 0.51195 + 0.46438$$

$$= 1.50415$$

$$b) \quad H(Y) = -[0.35 \log(0.35) + 0.45 \log(0.45) + 0.2 \log(0.2)]$$

$$= [0.53010 + 0.51840 + 0.46438]$$

$$= 1.51288$$

$$c) \quad D(X||Y) = \sum_x P(x) \log_b \left[\frac{P(x)}{q(x)} \right]$$

$$= 0.33 \log_2 \left[\frac{0.33}{0.35} \right] + 0.47 \log_2 \left[\frac{0.47}{0.45} \right] + 0.2 \log_2 \left[\frac{0.2}{0.2} \right]$$

$$= -0.02801 + 0.02948 + 0$$

$$= 1.47 \times 10^{-3}$$

$$= 0.00147$$

d) $D(Y|X)$

$$0.35 \log_2 \left[\frac{0.35}{0.33} \right] + 0.45 \log_2 \left[\frac{0.45}{0.47} \right] + 0.2 \log_2 \left[\frac{0.2}{0.2} \right]$$

$$= 0.02971 - 0.02823$$

$$= 1.48 \times 10^{-3}$$

$$= 0.00148$$

$$= 0.00148$$

e) $H(X,Y) = - \sum_{x,y} P(x,y) \log_2 P(x,y)$

$$= [0.13 \log_2(0.13) + 2(0.15 \log_2(0.15)) + 0.05 \log_2(0.05) + 0.2 \log_2(0.2) + 0.12 \log_2(0.12) + 0.07 \log_2(0.07) + 0.1 \log_2(0.1) + 0.03 \log_2(0.03)]$$

$$= 0.38264 + 0.82108 + 0.21609 + 0.46438 + 0.36706 + 0.26855 + 0.33219 + 0.15176$$

$$= 3.00375 \text{ bits}$$

f) $H(Y|X) = H(X,Y) - H(X)$

$$= 3.00375 - 1.50415$$

$$= 1.4996$$

$$H(Y) - H(Y|X) = 1.51288 - 1.4996$$

$$= 0.01328$$

$$= 0.01328$$

$$= 0.01328$$

$$\begin{aligned}
 9) \quad I(X, Y) &= H(Y) - H(Y|X) \\
 &= 1.51288 - 1.4996 \\
 &= 0.01328
 \end{aligned}$$

2) Given Entropy is 4.3 bits
 1 Hartley = $\log_2(10)$ bits = 3.32193
 Convert bits to hartley

$$1 \text{ bit} = \frac{1}{3.32193} \text{ hartley}$$

$$\text{so } 4.3 \text{ bit} = \frac{4.3}{3.32193} = \boxed{1.29443 \text{ hartley}}$$

$$1 \text{ nat-s} = \frac{1 \text{ hartley}}{2.303}$$

$$\begin{aligned}
 \text{so } 1 \text{ hartley} &= 2.303 \text{ nat-s} \\
 1.29443 \text{ hartley} &= 2.303 \times 1.29443 \\
 &= \boxed{2.98107 \text{ nat-s}}
 \end{aligned}$$

③ As it is a standard die
 probability of getting 2, 3, 1, 6, 4 is $1/6$.

$$I = \log(1/p)$$

$$I_A + I_B = \log\left(\frac{1}{P_A}\right) + \log\left(\frac{1}{P_B}\right)$$

$$= \log\left(\frac{1}{1/6}\right) + \log\left(\frac{1}{1/6}\right) + \log\left(\frac{1}{1/6}\right) + \log\left(\frac{1}{1/6}\right)$$

$$+ \log\left(\frac{1}{1/6}\right)$$

$$= \log(6) + \log(6) + \log(6) + \log(6) + \log(6)$$

$$= \log(6^5) = 5 \log 6$$

$$= 5 \times 2.58496$$

$$= \boxed{\underline{\underline{12.9248 \text{ bits}}}}$$

4) Die 1

probability of getting 1, 2, 3, 4, 5, 6 = $1/6$

$$\text{Entropy} = - \sum p(x) \log_2 p(x)$$

$$= - 6 \cdot \frac{1}{6} \log_2 \left(\frac{1}{6}\right)$$

$$= - 6 \left[\frac{1}{6} \log \left(\frac{1}{6}\right) \right]$$

$$= \boxed{\underline{\underline{2.58496}}}$$

Die 2

$$P(1) = 0.35$$

$$P(6) = 0.25$$

$$P(2,3,4,5) = [1 - [0.35 + 0.25]] / 4 \\ = 0.1$$

$$- [0.35 \log(0.35) + 4(0.1 \log(0.1)) + 0.25 \log(0.25)]$$

$$= - [-0.53010 - 1.32877 - 0.5]$$

$$= \underline{\underline{2.35887 \text{ bits}}}$$
